

Submission

Put the ipynb file and html file in the github branch you created in the last assignment and submit the link to the commit in brightspace

```
In [1]: from plotly.offline import init_notebook_mode
import plotly.io as pio
import plotly.express as px

init_notebook_mode(connected=True)
pio.renderers.default = "plotly_mimetype+notebook"
```

```
In [2]: #load data
df = px.data.gapminder()
df.head()
```

```
Out [2]:
```

	country	continent	year	lifeExp	pop	gdpPercap	iso_alpha	iso_num
0	Afghanistan	Asia	1952	28.801	8425333	779.445314	AFG	4
1	Afghanistan	Asia	1957	30.332	9240934	820.853030	AFG	4
2	Afghanistan	Asia	1962	31.997	10267083	853.100710	AFG	4
3	Afghanistan	Asia	1967	34.020	11537966	836.197138	AFG	4
4	Afghanistan	Asia	1972	36.088	13079460	739.981106	AFG	4

Question 1:

Recreate the barplot below that shows the population of different continents for the year 2007.

Hints:

- Extract the 2007 year data from the dataframe. You have to process the data accordingly
- use [plotly bar](#)
- Add different colors for different continents
- Sort the order of the continent for the visualisation. Use [axis layout setting](#)
- Add text to each bar that represents the population

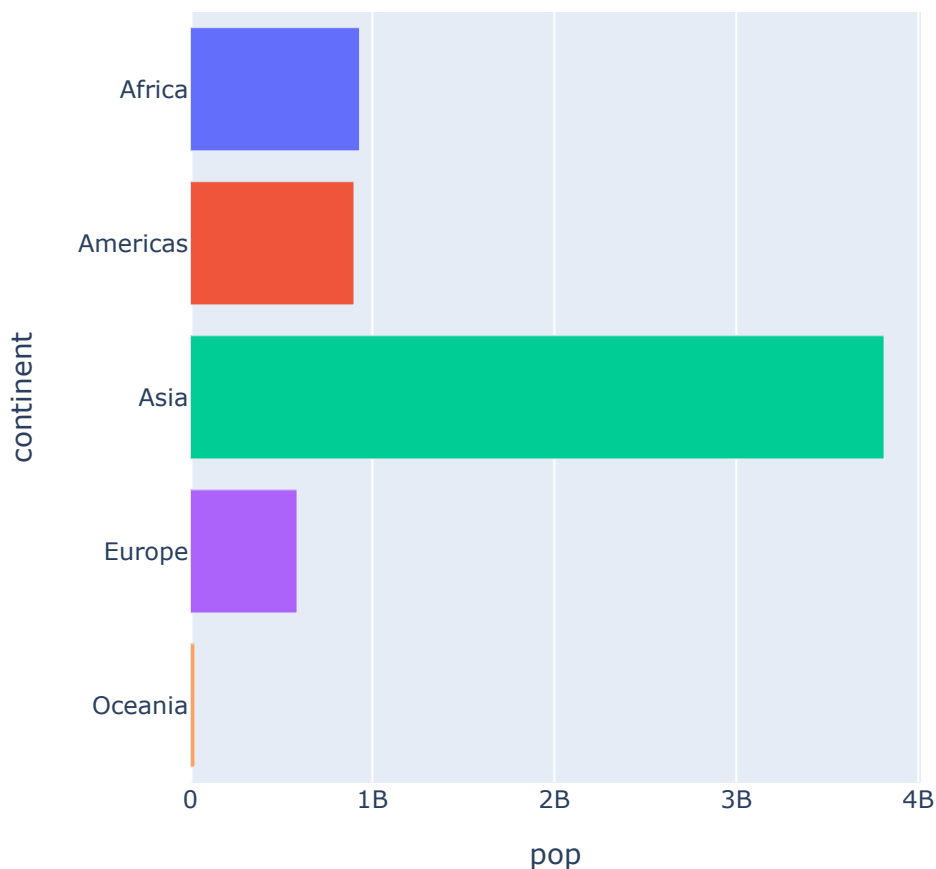

```
In [7]: # YOUR CODE HERE
# Filter the DataFrame to select data for the year 2007
df_2007 = df[df["year"]==2007]

# Group the filtered data by continent and calculate the sum of numeric c
df_pop = df_2007.groupby("continent")["pop"].sum()
df_pop = df_pop.to_frame()
df_pop = df_pop.reset_index()

# Create a bar chart using Plotly Express
fig = px.bar(df_pop, x="pop", y="continent", color="continent",
             text_auto=".2s")

fig.update_layout(showlegend=False)

fig.show()
```

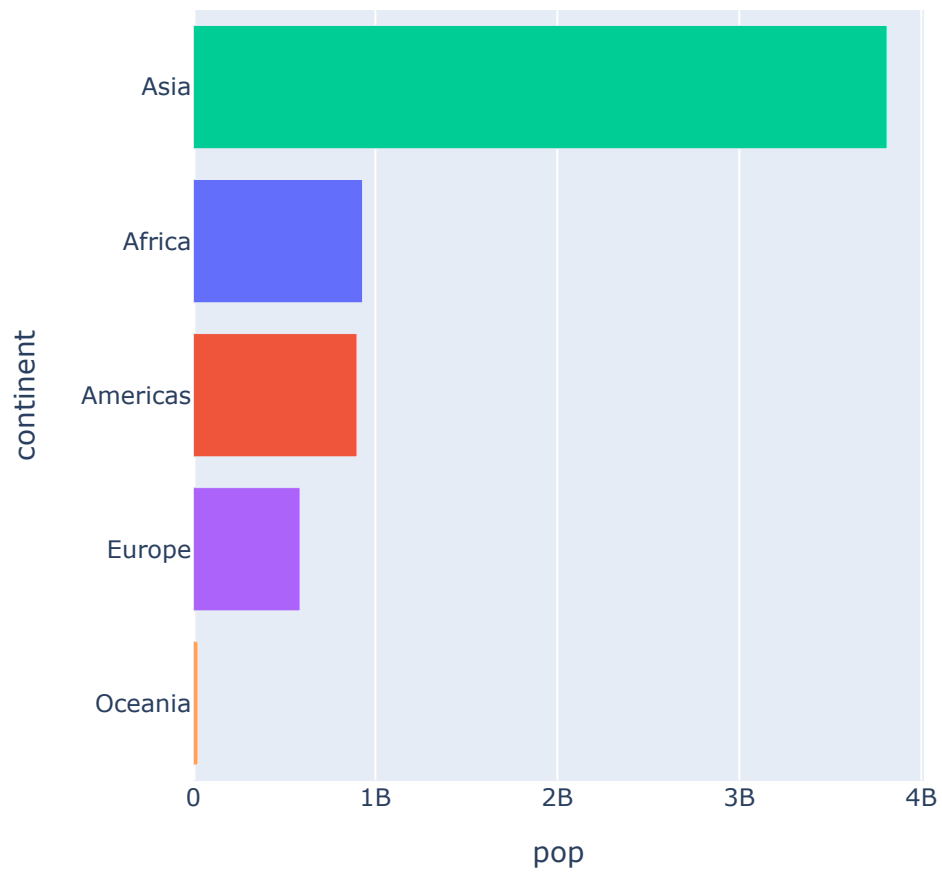

Question 2:

Sort the order of the continent for the visualisation

Hint: Use [axis layout setting](#)

```
In [8]: # YOUR CODE HERE
fig.update_layout(barmode="stack", yaxis={"categoryorder":"total ascending"})
fig.show()
```

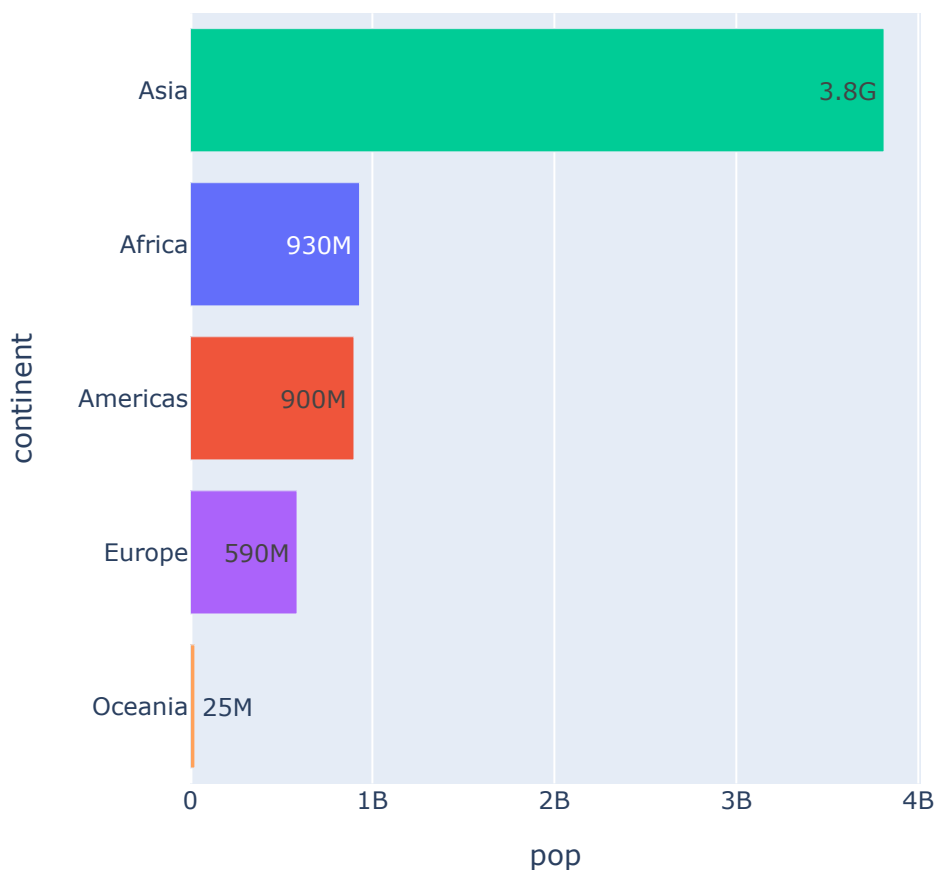

Question 3:

Add text to each bar that represents the population

```
In [10]: # YOUR CODE HERE
fig = px.bar(df_pop, x="pop", y="continent", color="continent",
             text_auto=".2s")

fig.update_layout(showlegend=False)
fig.update_layout(barmode="stack", yaxis={"categoryorder": "total ascending"})

fig.show()
```

Question 4:

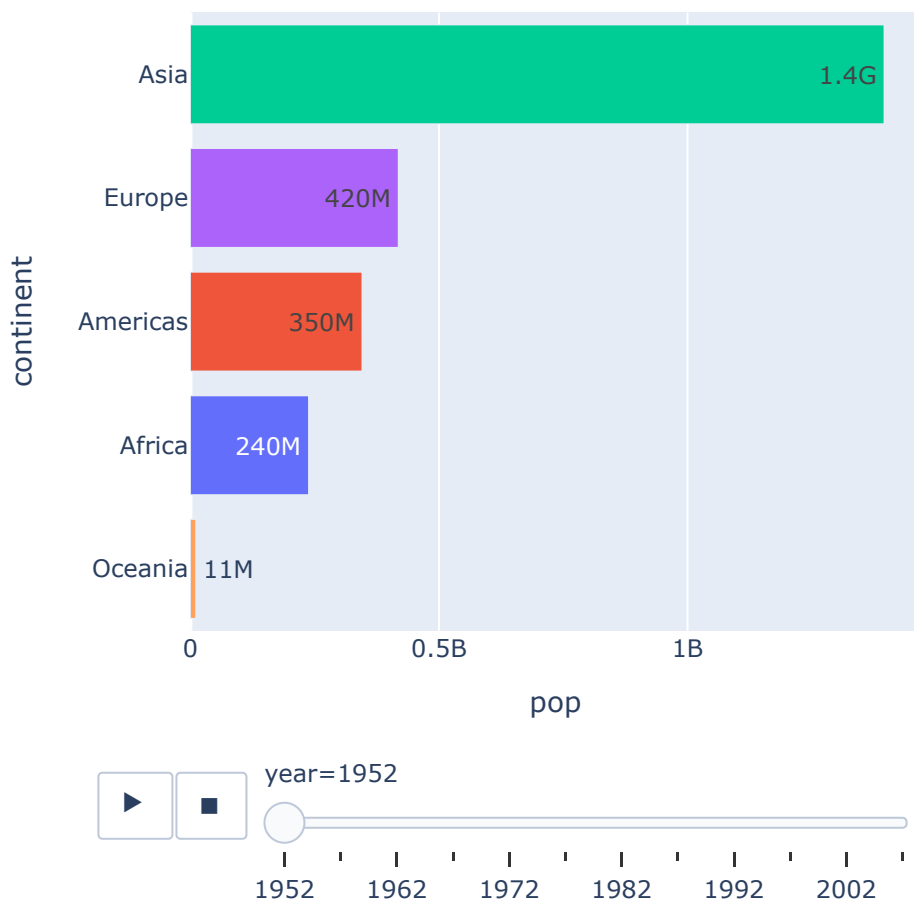

Thus far we looked at data from one year (2007). Lets create an animation to see the population growth of the continents through the years

```
In [17]: # YOUR CODE HERE
df_pop_all = df.groupby(["year", "continent"])["pop"].sum()
df_pop_all = df_pop_all.to_frame()
df_pop_all = df_pop_all.reset_index()

fig = px.bar(df_pop_all, x="pop", y="continent", color="continent",
             animation_frame="year", text_auto=".2s")

fig.update_layout(showlegend=False)
fig.update_layout(barmode="stack", yaxis={"categoryorder": "total ascending"})

fig.show()
```

Question 5:

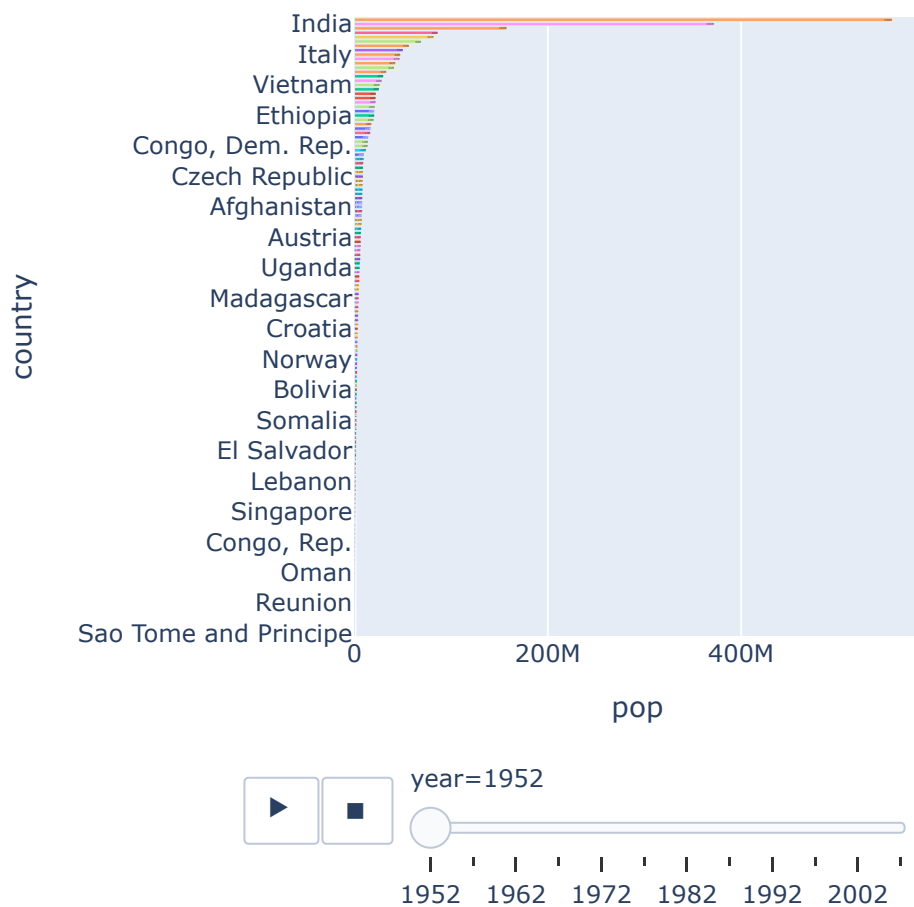

Instead of the continents, let's look at individual countries. Create an animation that shows the population growth of the countries through the years.

```
In [19]: # YOUR CODE HERE
df_pop_country = df.groupby(["year", "country"])["pop"].sum()
df_pop_country = df_pop_country.to_frame()
df_pop_country = df_pop_country.reset_index()

fig = px.bar(df_pop_country, x="pop", y="country", color="country",
             animation_frame="year", text_auto=".2s")

fig.update_layout(showlegend=False)
fig.update_layout(barmode="stack", yaxis={"categoryorder": "total ascending"})

fig.show()
```

Question 6:

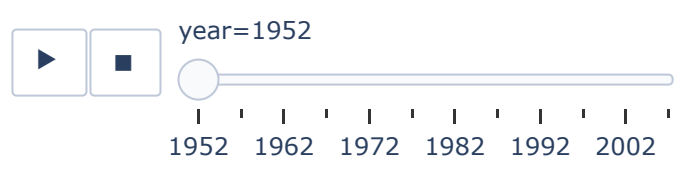

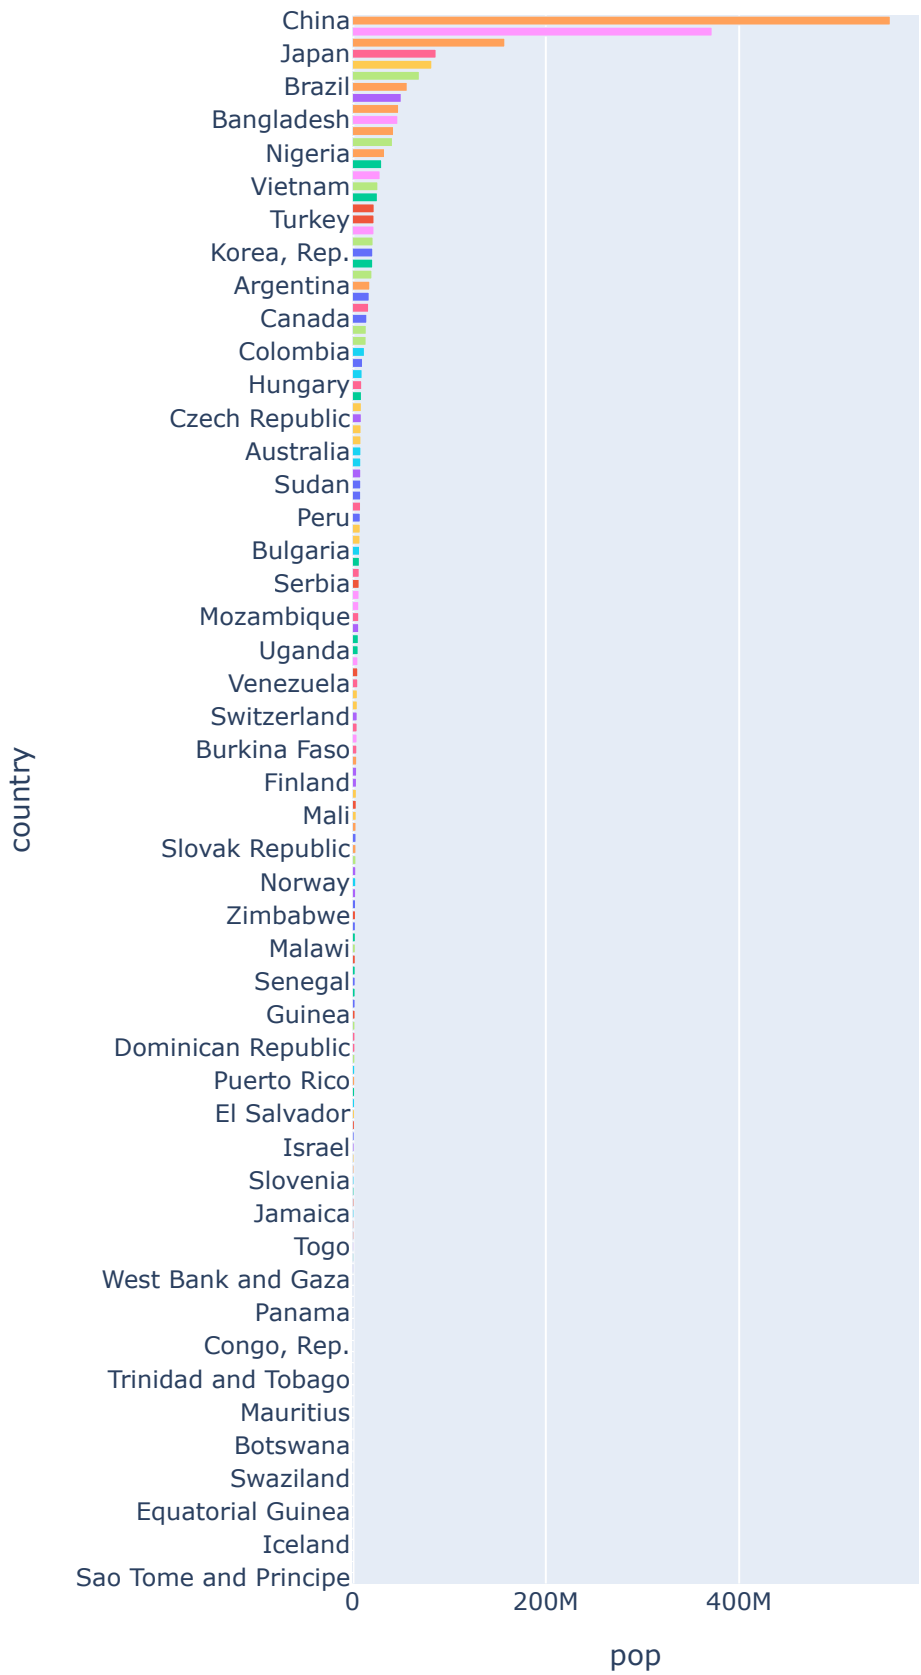

Clean up the country animation. Set the height size of the figure to 1000 to have a better view of the animation

```
In [52]: # YOUR CODE HERE
df_pop_country = df.groupby(["year", "country"])["pop"].sum()
df_pop_country = df_pop_country.to_frame()
df_pop_country = df_pop_country.reset_index()
country_count = df.groupby(["country"])["pop"].sum()

fig = px.bar(df_pop_country, x="pop", y="country", color="country",
             animation_frame="year", height = 1000)

fig.update_layout(showlegend=False)
fig.update_layout(barmode="stack", yaxis={"categoryorder": "total ascending"})

fig.show()
```

Question 7:

Show only the top 10 countries in the animation

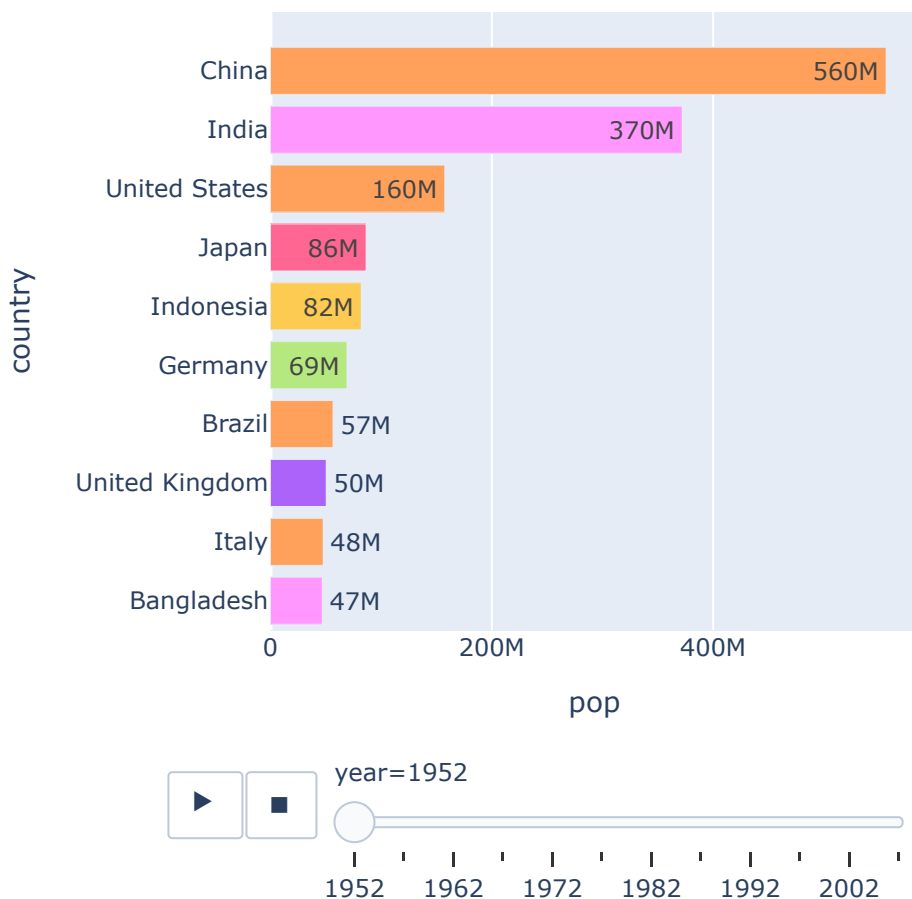

Hint: Use the axis limit to set this.

```
In [49]: # YOUR CODE HERE
df_pop_country = df.groupby(["year", "country"])["pop"].sum()
df_pop_country = df_pop_country.to_frame()
df_pop_country = df_pop_country.reset_index()
country_count = df.groupby(["country"])["pop"].sum()

fig = px.bar(df_pop_country, x="pop", y="country", color="country",
             animation_frame="year", text_auto=".2s")

fig.update_layout(showlegend=False)
fig.update_layout(barmode="stack", yaxis={"categoryorder": "total ascending"})
fig.update_yaxes(range=(len(country_count)-10.5, len(country_count)))

fig.show()
```
